SUMMARY

Full-Stack Developer and AI Systems Architect with 2.5+ years of experience delivering 15+ enterprise and government-grade applications using Java (Spring Boot, Quarkus), PHP (Symfony), and Python. Proficient in designing scalable REST APIs, MVC architectures, and event-driven systems. Leverages AI-powered development tools and modern LLM workflows to accelerate delivery, improve code quality, and rapidly adapt across technology stacks. Experienced in CI/CD pipelines, microservices, and secure application design for high-traffic platforms.

EDUCATION

B.E Computer Science and Engineering

Ponjesly College Of Engineering, Tamilnadu, India

Aug 2019 - Apr 2023

7.57 CGPA

TECHNICAL SKILLS

Programming: Java, PHP, Python, JavaScript

Frameworks: Spring Boot, Quarkus, Symfony, Flask, JQuery

AI & Tools: AI-Assisted Development, LLM Workflow Integration, GitHub Copilot, Prompt Engineering, Keycloak, Jenkins, OpenSearch, Netflix Eureka, Postman, Git, Redis

Database: PostgreSQL, MySQL, MongoDB

Key Specialization: REST API Design, Microservices, Event-Driven Architecture, CI/CD Pipelines, OOP, DSA

EXPERIENCE

Full Stack Developer – National Informatics Centre, Trivandrum

Oct 2023 – Present

- Develop and optimize secure Govt web applications and RESTful APIs for high-impact government projects, focusing on system reliability and MVC-based architecture using Java Spring Boot, PHP Symfony, Python Flask.
- Leverage AI-assisted coding tools to accelerate feature development, automate boilerplate generation, and maintain code quality across multi-stack projects.
- Architected and deployed a scalable full-stack Spring Boot and Quarkus application integrating RESTful APIs, Razorpay and Easebuzz payment gateways, and a custom Push Notification system. Automated deployments via Jenkins CI/CD pipelines.

PROJECTS

State Board Of Technical Education (SBTE) – Kerala Govt.

Oct 2023 – Jan 2025

- Web Application for Kerala's diploma education board managing the full student lifecycle — online admissions, exam registration, hall ticket generation, result processing, result publication, and student self-service portal.

Poll Manager (Election Monitoring System) – Kerala Govt.

Oct 2024 – Dec 2025

- Election monitoring system enabling designated officers to track polling activity, manage booth-level data, and report results in real time.

PROMPT – Project Resource Organization, Management & Planning Terminal

Jun 2025 – Present

- Internal NIC tool to log and manage project metadata — server specs, database configs, environment details, URL mappings, team info, and compliance records — built with PHP Symfony with microservice architecture.

Higher Secondary Education (HSE) Portal – Kerala Govt.

Jan 2025 – Present

- Developed portals for HSE admissions, exam management, and student services across Kerala. Built Result Processing and Publication engines in Python for high-volume data handling and real-time result access for millions of students.
- Designed and developed a high-performance HSE results project in Python, optimized with Redis to support massive user traffic and improve system responsiveness.

Consumer Applications – GARS, Pookie Glow & Menu Maker

- Built backend services and RESTful APIs for three Spring Boot applications: a multi-service request platform (GARS), a restaurant menu management system (Menu Maker), and a beauty progress tracking app (Pookie Glow)
- Integrated Razorpay and Easebuzz payment gateways with Push notifications, webhook handling, and configured Jenkins-based CI/CD pipelines for automated builds, testing, and seamless application deployments.
